DAILY MESSAGE OF THE GLORIFIED CHRIST JESUS, TRANSMITTED IN THE MARIAN CENTER OF AURORA, PAYSANDU, URUGUAY, TO THE VISIONARY FRIAR ELÍAS DEL SAGRADO CORAZÓN DE JESÚS

Series - Manifestation of Aurora - Part IV

Within the lands granted to the Center of Aurora, on the surface, in the areas of Redención 1 and of Redención 2, the system of cultivation must be expanded.

First, within the spaces that will be dedicated for this conclusion, a process of preparation of the land must be generated through a plan of agroforestry, a method of recovery and of increasing awareness about the care of the soil so that, in a true ecosystem, the water may find a channel and a way to nourish the land.

It is already time for the members of the Light-Community and the Monasteries, as well as the collaborators, to learn about the care of the soil and the preparation of the land for future cultivation.

In this sense, bringing in new knowledge and applying it to an awareness of group life, the role of the Light-Community, in its mission and purpose of self-sustainability, will expand and be strengthened.

Natural and organic cultivation within the Light-Communities will be the main basis for survival during the most critical cycle of the planet since 90% of humanity makes use of and digests toxic plant foods which, in current times, represent the reason for an 80% lack of health and low quality of life.

In Aurora, it will be necessary to organize a space and an infrastructure to keep a seed bank that can provide 95% of the living food which comes from vegetables and fruit trees.

In order for that aspiration of the Hierarchy to become a reality, amongst the residents, the consecrated and the collaborators, a group of support and work must be created to gradually bring this aspiration into materialization, term by term.

It is important that all members of the Light-Community and of the consecrated life of Aurora learn about the agroforestry system and about the cultivation since, at the end of times, it will be essential that any brother or sister know how to recognize the conditions of the soil in order to be able to sow and later to harvest.

Organic and non-genetically modified food is a mission of the Light-Communities in order to preserve not only a quality of life but also the natural principle through which foods were created.

Each region where there is a Light-Community must develop the system of cultivation and care for the soil, according to environmental and ecological factors.

I thank you for keeping My Words in your heart!

Who blesses you,

Your Master, Christ Jesus
